

PEBBLE BROOK
ELEMENTARY

Animal Coloring & Activity Book

18 Animals Our Class Picked to Color & Solve

Example book. Pebble Brook Elementary is a fictional school.

Wild Atlas

Welcome to Pebble Brook Elementary!

Our school

Pebble Brook Elementary is a neighborhood school for children from pre-kindergarten to fifth grade. We learn together, play outside, and love our school garden and our library. Room 4 made this book to share a little of our school with your family. We voted for our 18 favorite animals, and they are all inside.

How this book works

Every animal gets two pages: the animal to color on the left, with real facts to read aloud, and a puzzle or something to draw on the right. Read each one-line instruction once; the little picture reminds your explorer what to do. Crayons and colored pencils work best. Most answers are printed upside down on the page; the rest are in the answer key.

A free class pack

Your family gets a free Wild Atlas pack with the 18 animals our class picked, in the Wild Atlas app, an ad-free animal app for kids. The claim page is near the back of the book.

With their powerful paws, lions can knock prey to the ground in a single swipe.

A lion's tongue is so rough it can lick meat right off a bone.

The males can weigh as much as three adult humans put together.

Eats: Carnivore (meat)
Habitat: African savannas and grasslands
Danger: Extremely Dangerous

Lion

Africa and Asia

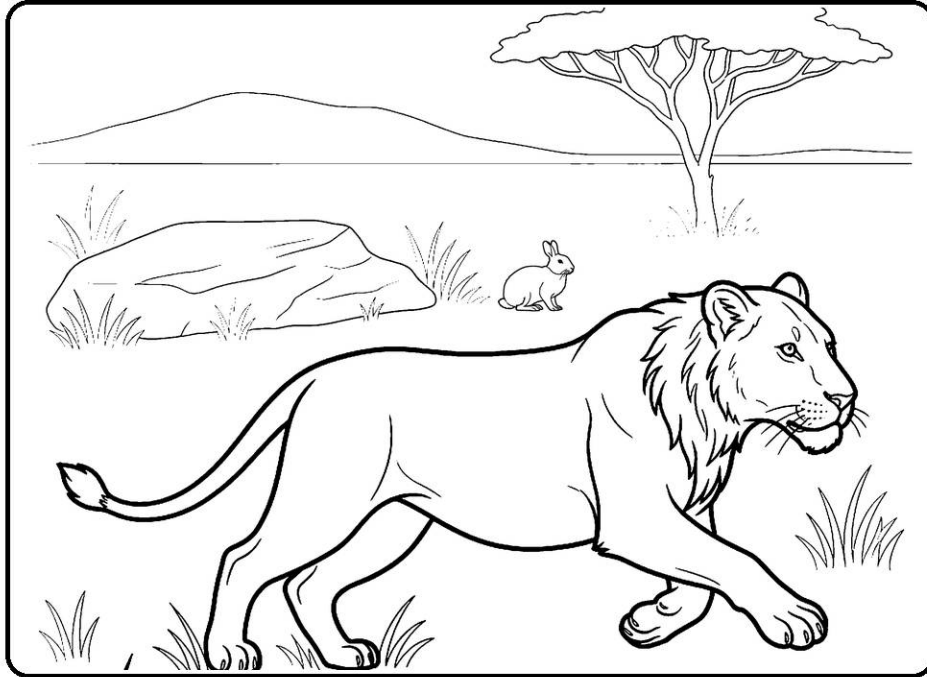

Wild Atlas

Giant pandas have lived on Earth for about 2 million years.

Pandas are excellent climbers and sometimes sleep in trees.

A panda's jaw muscles are so strong they can crush thick bamboo stems.

Eats: Herbivore (plants)
Habitat: Bamboo forests in the mountains
Danger: Keep Your Distance

Panda

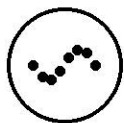

China

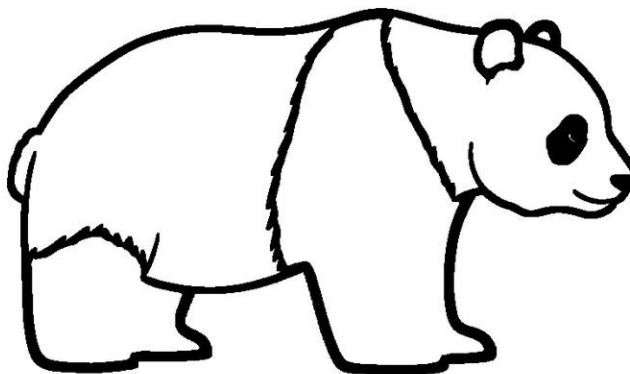

Wild Atlas

Dolphins leap out of the water to save energy when swimming fast.

They work together to catch fish by swimming in circles around them.

Baby dolphins stay close to their mothers for up to three years.

Eats: Carnivore (meat)
Habitat: Oceans and seas
Danger: Safe

Answers: Dolphin 3, Clownfish 5, Starfish 4

Dolphin

Pebble Brook Elementary

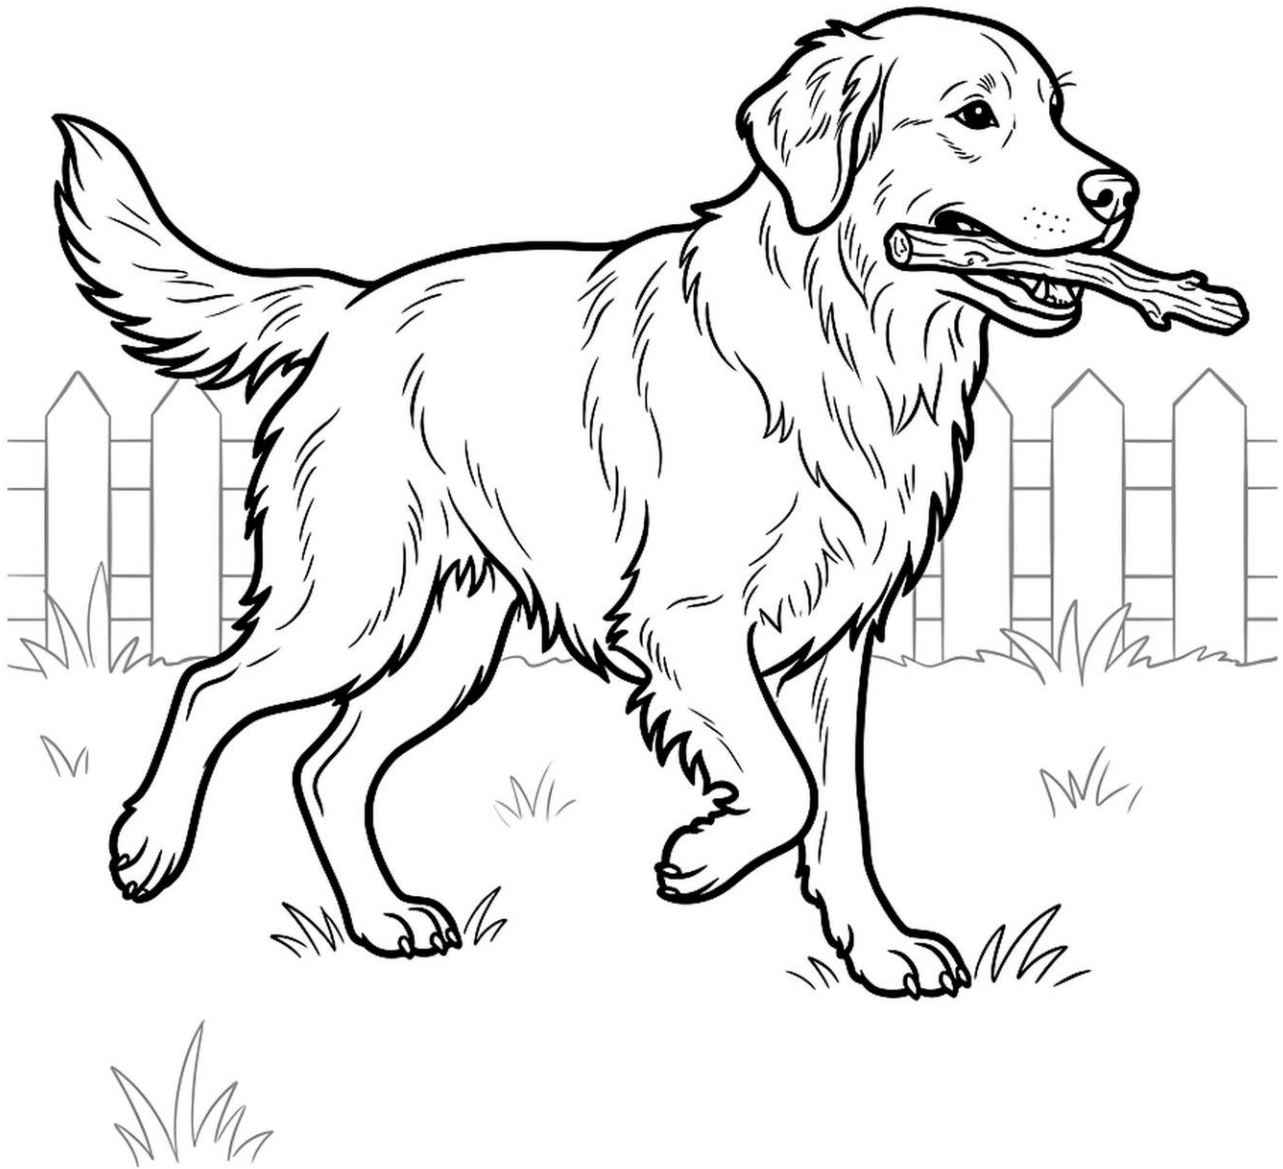

Wild Atlas

A Golden Retriever's nose has 300 million scent receptors — that's 50 times more than humans!

They were bred to retrieve birds for hunters without damaging them.

These dogs don't fully grow up until they're about 3 years old.

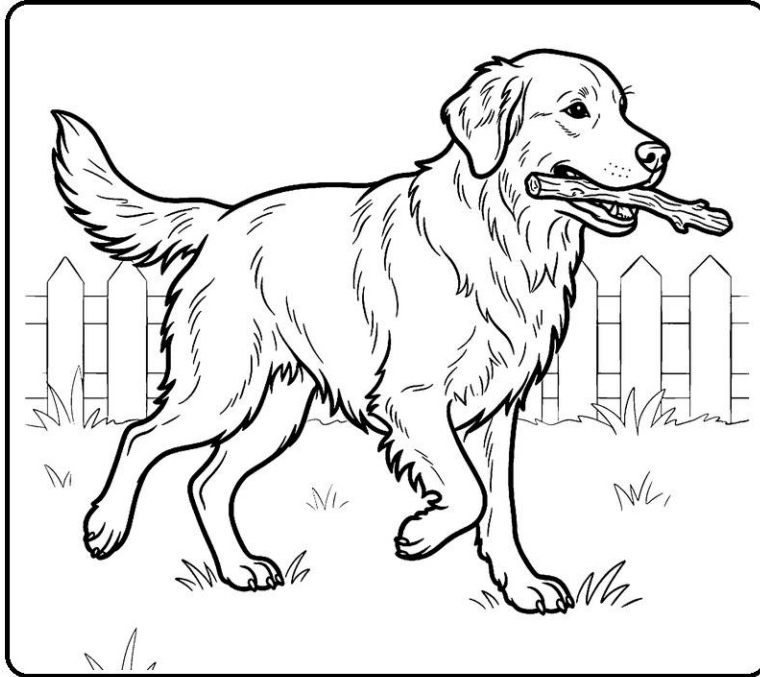

Golden Retriever

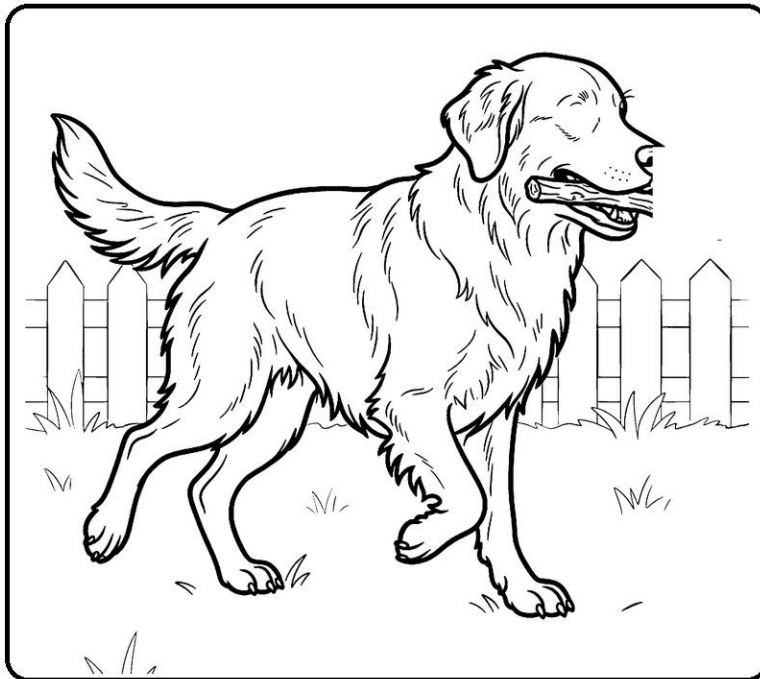

Spot the Difference

Golden Retriever

Pebble Brook Elementary

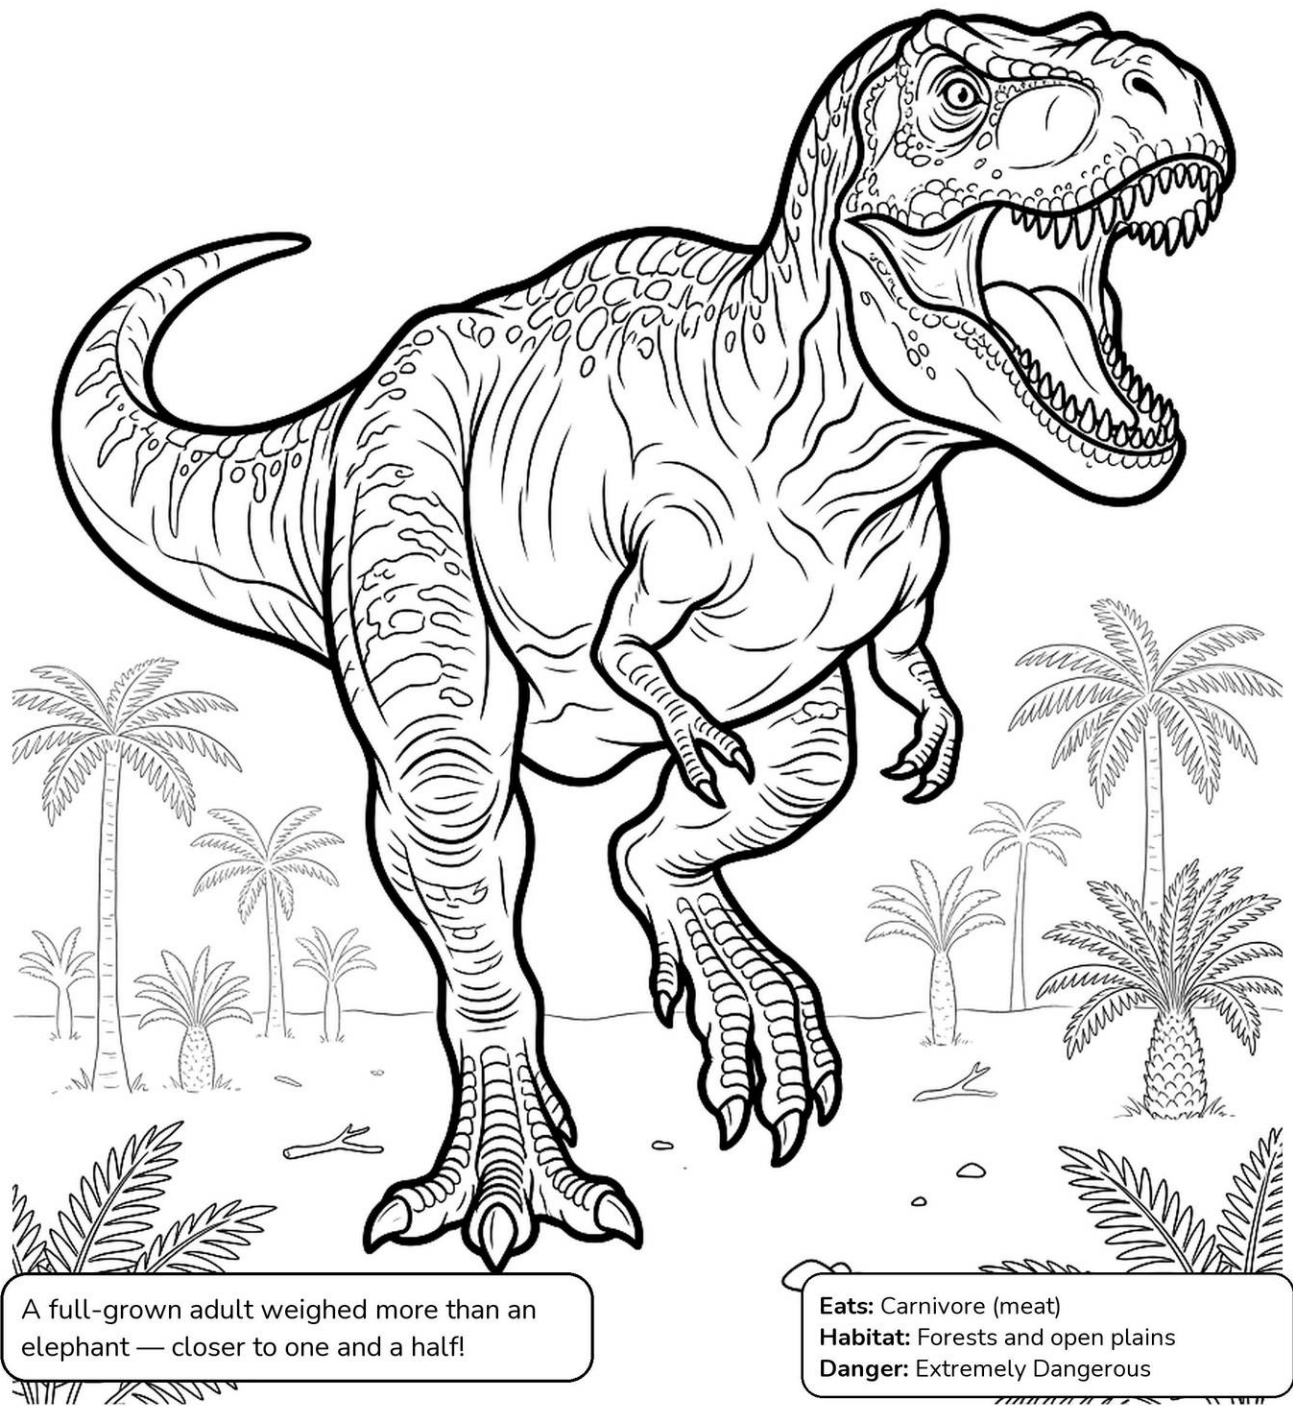

Wild Atlas

T. rex ran as fast as a car driving through your neighbourhood.

Its eyes were as big as softballs, and it could see better than an eagle.

A full-grown adult weighed more than an elephant — closer to one and a half!

Eats: Carnivore (meat)
Habitat: Forests and open plains
Danger: Extremely Dangerous

Tyrannosaurus rex

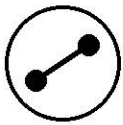

Lived in North America

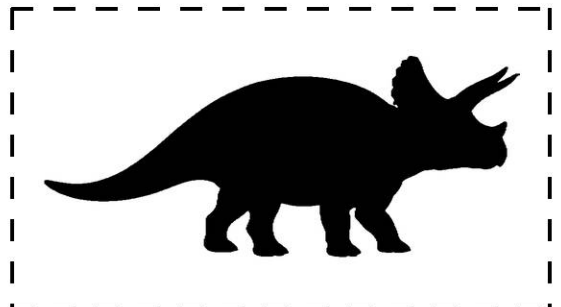

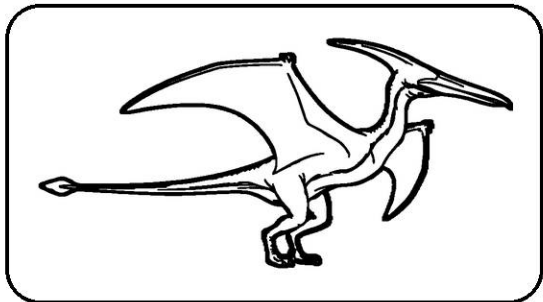

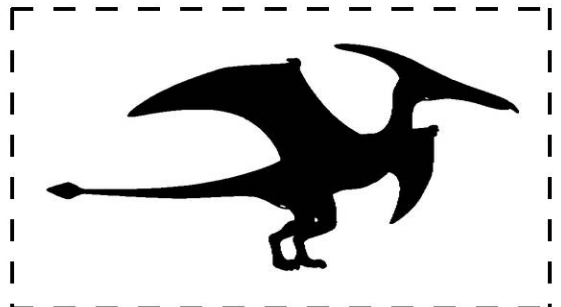

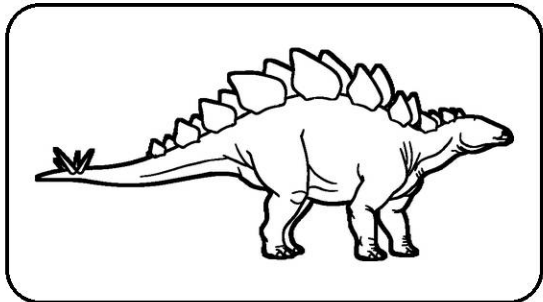

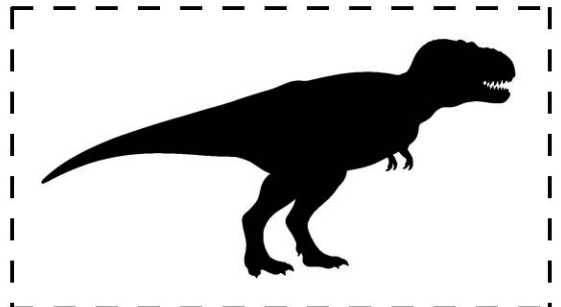

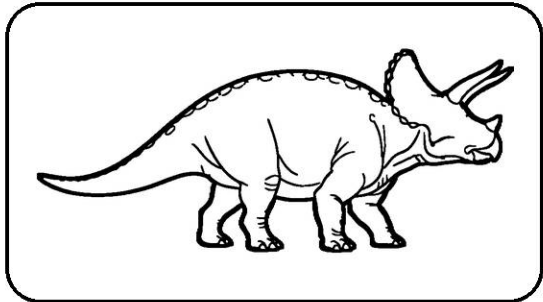

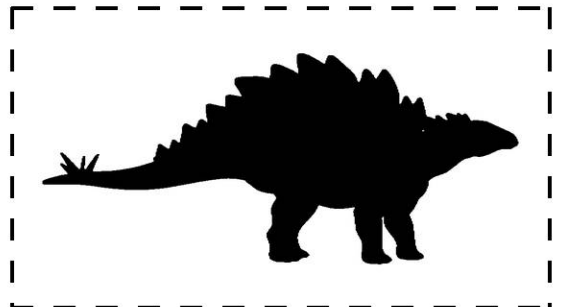

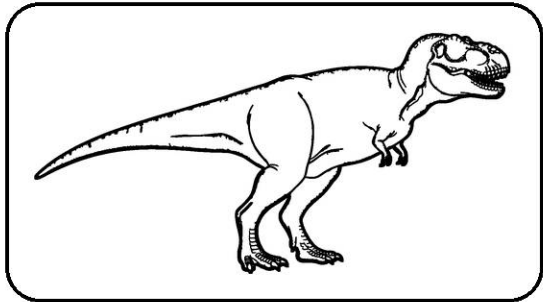

Wild Atlas

Shadow Match

Draw a line from each animal to its shadow.

Tyrannosaurus rex

ELEMENTARY

Emperor penguins toboggan on their bellies across the ice to move faster.

Their black and white coloring helps them hide from predators — white belly from below, black back from above.

Baby emperors can't swim until they lose their fluffy baby feathers and grow waterproof adult feathers.

Eats: Carnivore (meat)
Habitat: Antarctic ice and ocean
Danger: Safe

Emperor Penguin

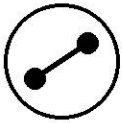

Antarctica

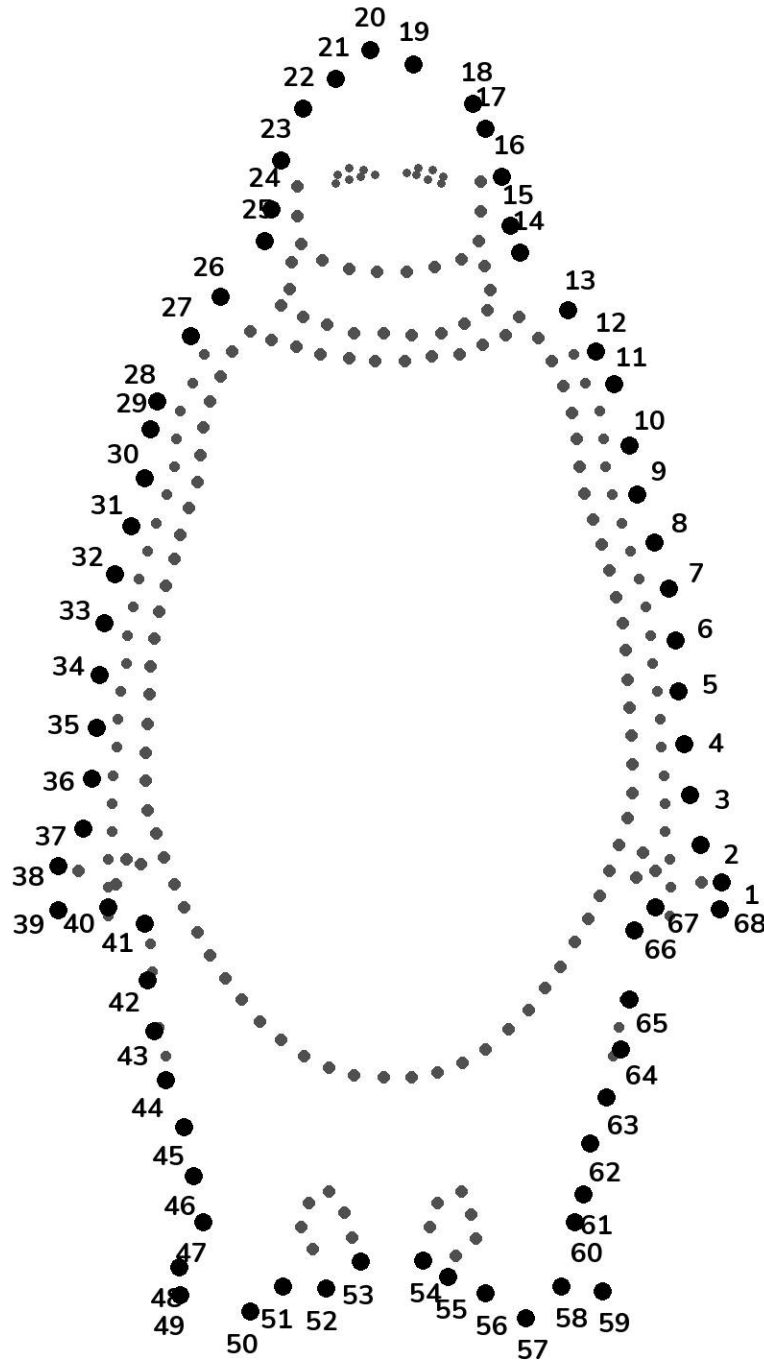

Wild Atlas

Giraffes are so tall they can look into second-floor windows.

Each giraffe has a unique pattern of spots, just like human fingerprints.

They can run as fast as 56 kilometres per hour when they need to escape danger.

Eats: Herbivore (plants)
Habitat: African grasslands and open woodlands
Danger: Keep Your Distance

Giraffe

Wild Atlas

Maine Coons are sometimes called 'gentle giants' because they're so big but so friendly.

They love water and might try to join you in the bath!

They take 3 to 4 years to grow to full size — much longer than other cats.

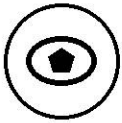

Maine Coon

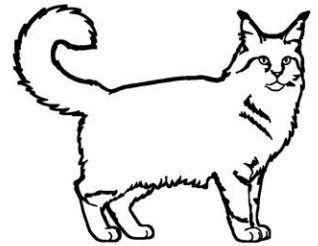

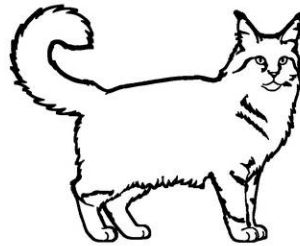

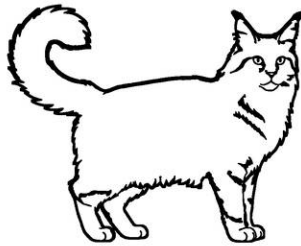

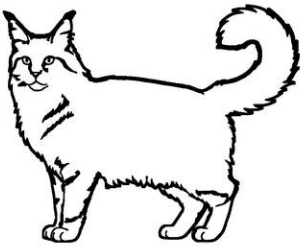

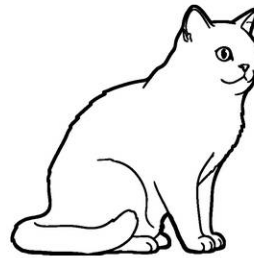

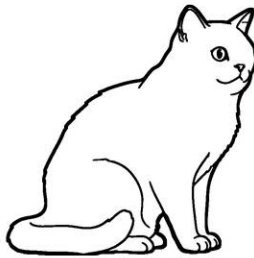

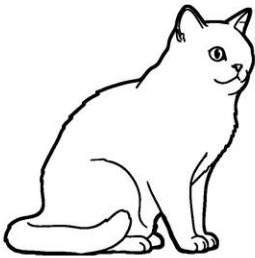

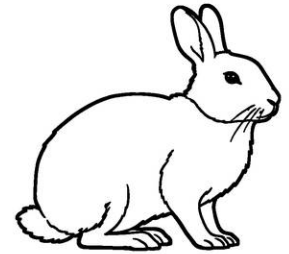

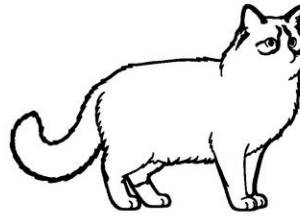

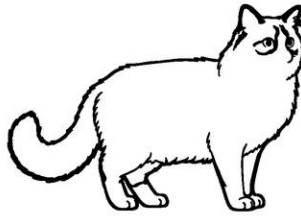

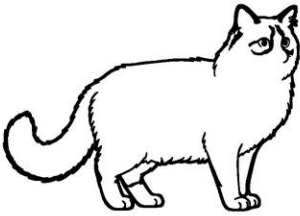

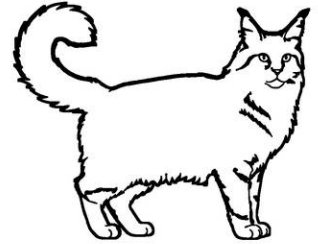

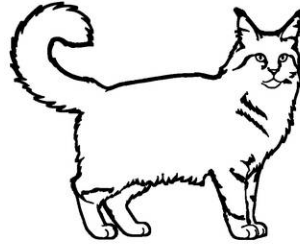

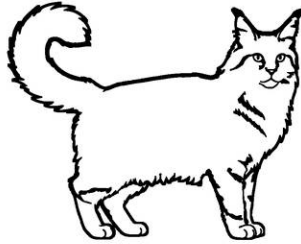

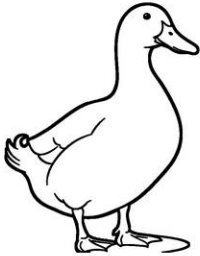

Wild Atlas

Odd One Out

Circle the one that is different in each row.

Answers: row 1: #1, row 2: #4, row 3: #4, row 4: #1

Maine Coon

Row 4 is tricky — look closely!

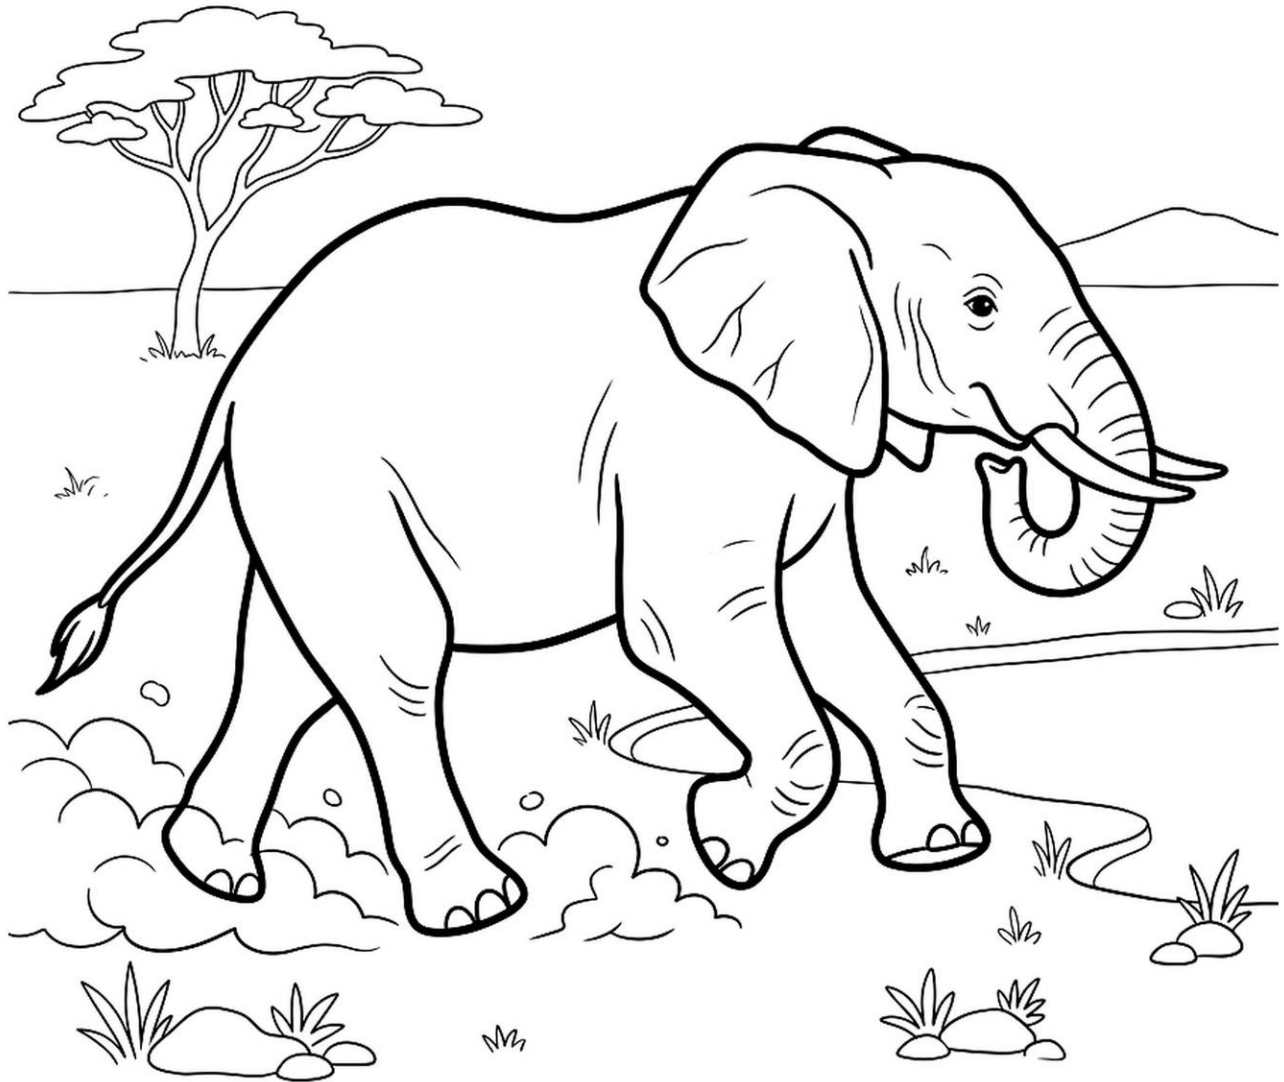

Wild Atlas

PEBBLE BROOK
ELEMENTARY

An elephant's tusks are actually giant teeth that never stop growing.

Elephants love taking mud baths to protect their skin from sunburn and bug bites.

A baby elephant can stand up and walk just 20 minutes after being born.

Eats: Herbivore (plants)
Habitat: African grasslands, savannas, and forests
Danger: Dangerous

African Elephant

Polar bears are amazing swimmers and can paddle for days without stopping.

Baby polar bears are born tiny — about the size of a guinea pig!

They don't drink water — they get all the water they need from the seals they eat.

Eats: Carnivore (meat)
Habitat: Arctic sea ice and frozen coasts
Danger: Extremely Dangerous

Wild Atlas

Baby sea turtles hatch at night and race to the ocean guided by moonlight on the waves.

Leatherback sea turtles can dive deeper than 1,200 metres — that's as deep as four Eiffel Towers stacked on top of each other.

Sea turtles can't pull their heads and flippers into their shells like land turtles can.

Eats: Omnivore (meat and plants)
Habitat: Warm tropical oceans and sandy beaches
Danger: Safe

Horses sleep standing up by locking their knees so they don't fall over.

They use their ears, eyes, and nostrils to show how they're feeling.

A baby horse can stand up and walk just one hour after being born.

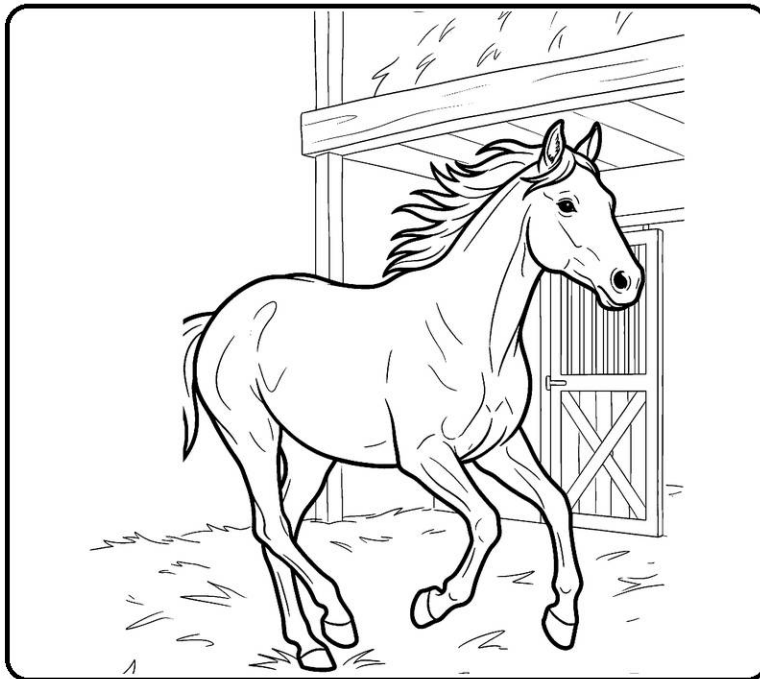

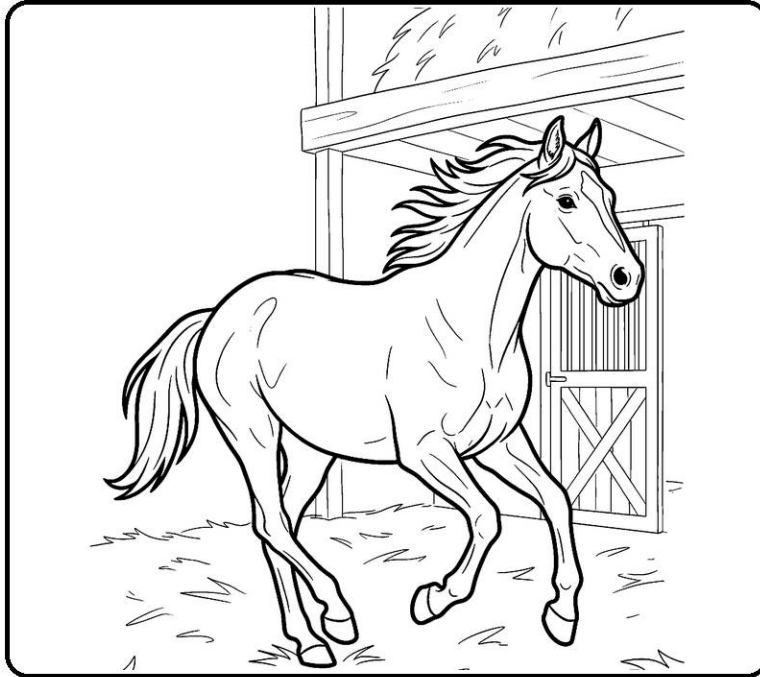

Horse

Wild Atlas

Triceratops had up to 800 teeth to chew tough plants.

Its skull was one of the biggest of any land animal ever.

The horns could grow over 3 feet long.

Eats: Herbivore (plants)
Habitat: Forests and plains
Danger: Dangerous

Triceratops

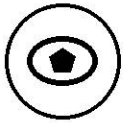

Lived in North America

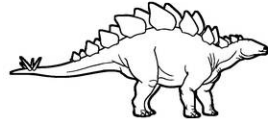

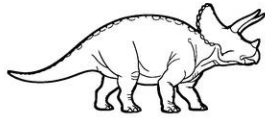

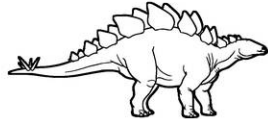

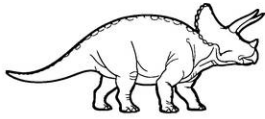

Wild Atlas

Red pandas have a special wrist bone that works like a thumb to help them grip bamboo.

They sleep in trees during the day and wake up at dusk to look for food.

A red panda's reddish-brown fur helps them hide among the red moss and white lichen in their forest home.

Eats: Omnivore (meat and plants)
Habitat: Mountain forests
Danger: Safe

Red Panda

Asia

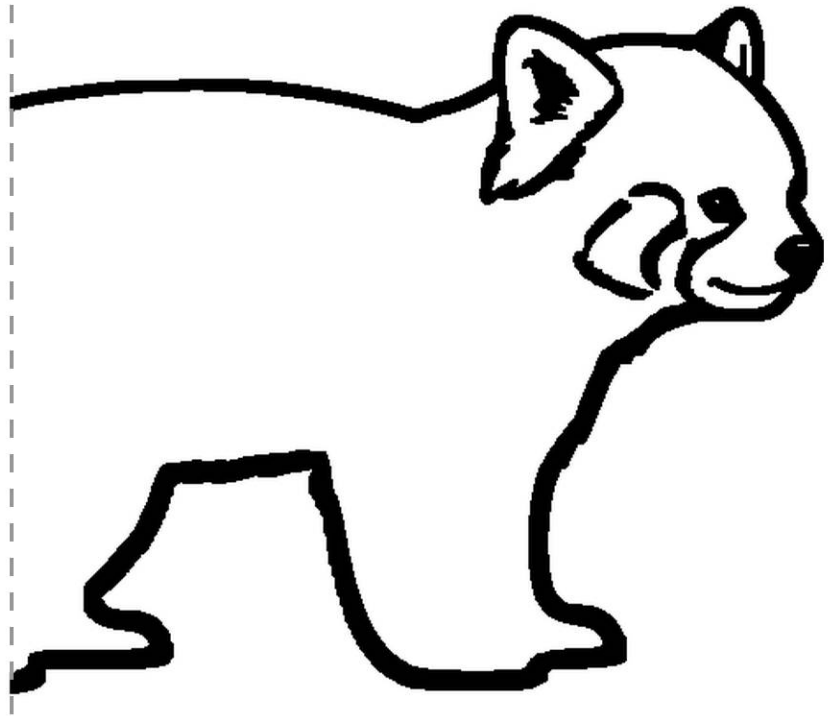

Wild Atlas

Finish Me!

Draw my big, bushy, stripy tail! Then color me in.

Red Panda

Pebble Brook Elementary

Wild Atlas

It can sleep for about twenty hours every single day, all curled up in a tree.

Its baby is called a joey, and it rides in a warm pocket on its mother's tummy.

It eats the leaves of just one kind of tree, called eucalyptus, which smell a bit like cough drops.

Eats: Herbivore (plants)
Habitat: Eucalyptus forests and woodlands
Danger: Caution

Rabbits thump their back feet on the ground to warn other rabbits about danger.

A rabbit can run up to 45 miles per hour — that's faster than a car in your neighborhood!

They are most active at dawn and dusk, not in the middle of the day.

Answers: Rabbit, Mouse, Hamster, Hedgehog, Turtle

Rabbit

Pebble Brook Elementary

Wild Atlas

No two tigers have the same stripes — its pattern is all its own, just like a fingerprint.

Its thick, furry coat keeps it warm and cosy even when snow is falling all around.

It has soft, padded paws, so it can creep through the forest without making a sound.

Eats: Carnivore (meat)
Habitat: Snowy boreal and temperate forests
Danger: Dangerous

Amur Tiger

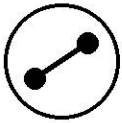

Russia and China

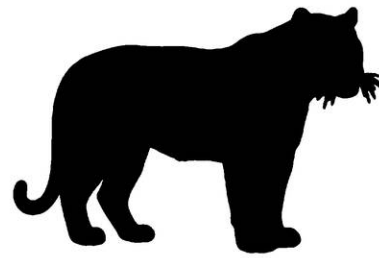

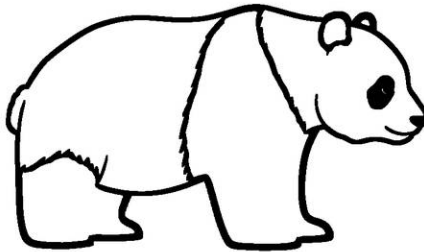

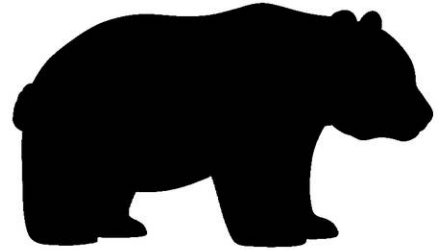

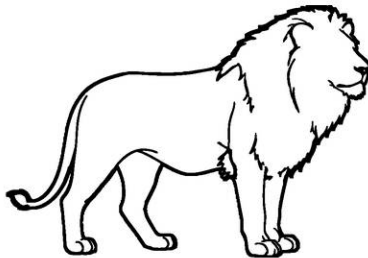

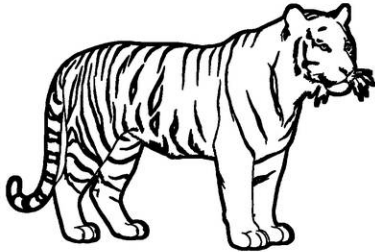

Wild Atlas

Shadow Match

Draw a line from each animal to its shadow.

Amur Tiger

Pebble Brook Elementary

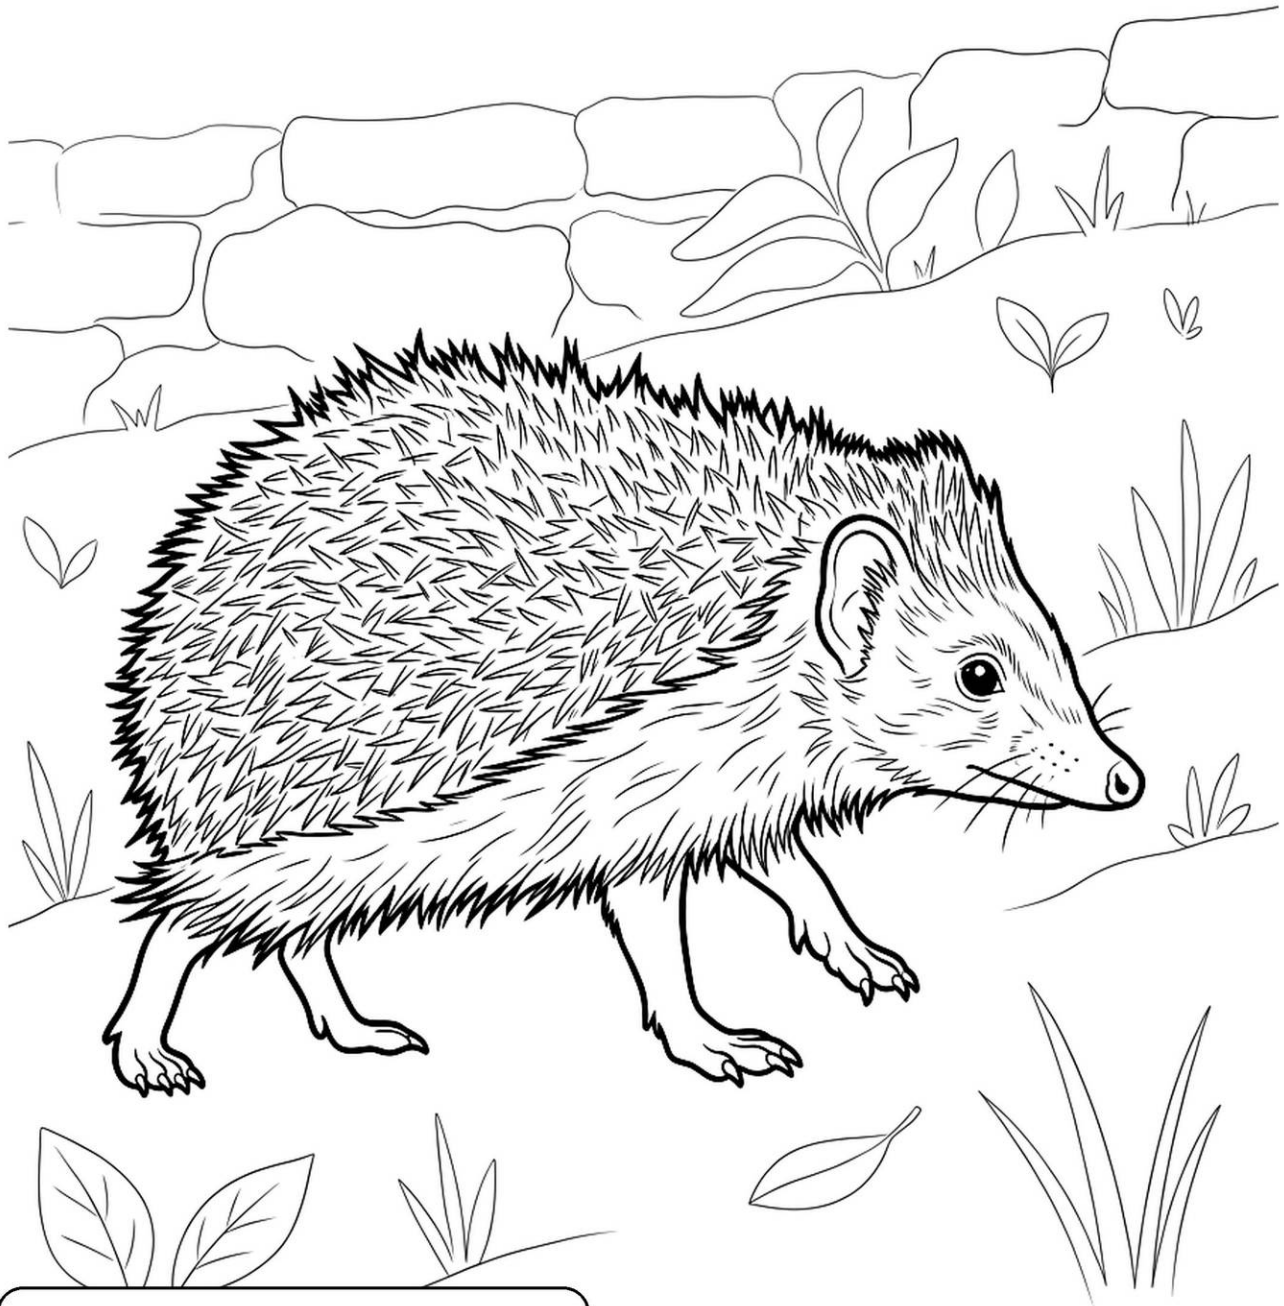

Wild Atlas

Hedgehogs snuffle and snort as they hunt for food at night.

Their spines are actually modified hairs made of keratin.

A hedgehog can run as fast as you can walk.

Hedgehog
